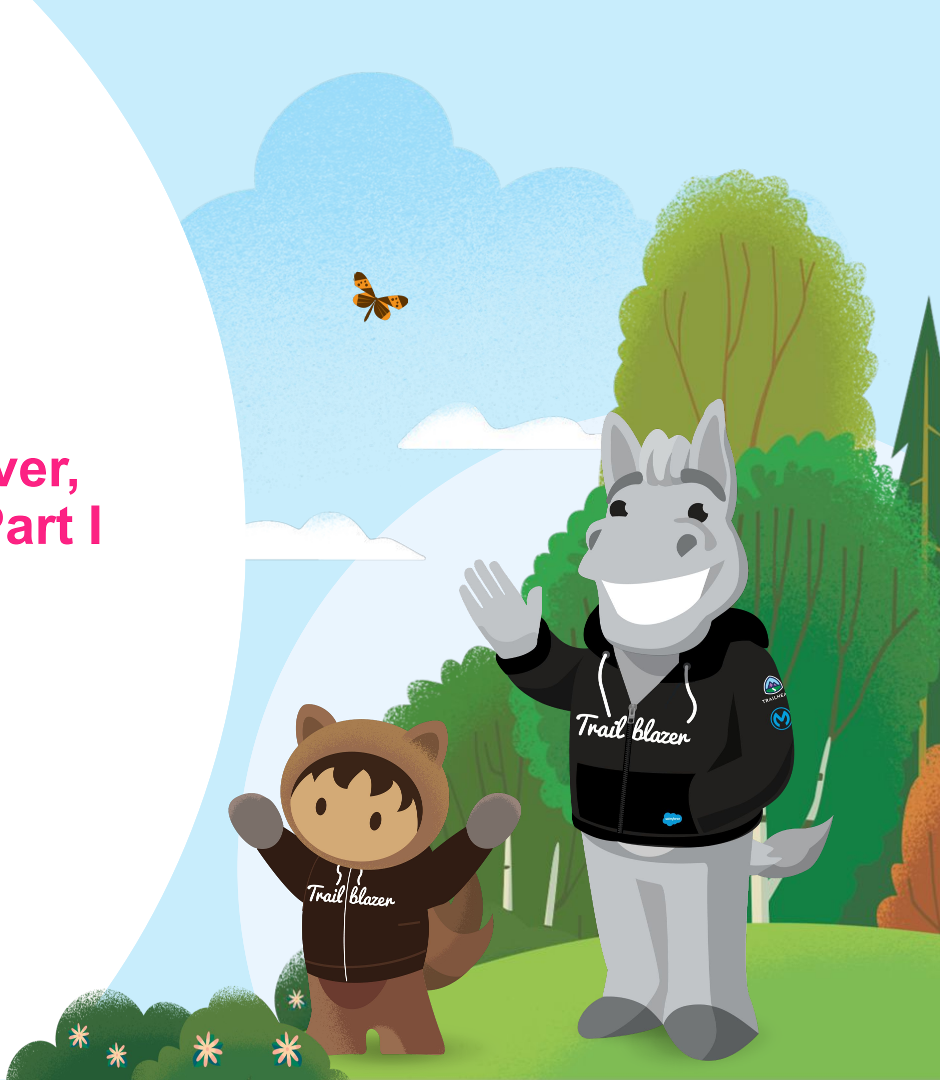
Surat MuleSoft Meetup

MuleSoft and AI: MuleSoft MCP Server, OMNI Gateway and Private Space - Part I

11-June-2026



Safe Harbour Statement

- Both the speaker and the host are organizing this meet-up in individual capacity only. We are not representing our companies here.
- This presentation is strictly for learning purposes only. Organizer/Presenter do not hold any responsibility that same solution will work for your business requirements.
- This presentation is not meant for any promotional activities.

Surat MuleSoft Meetup Group

Housekeeping

A recording of this meetup will be uploaded to events page within 24 hours.

Questions can be submitted/asked at any time in the Chat/Questions & Answers Tab.

Make it more **Interactive!!!**

Give us feedback! Rate this meetup session by filling feedback form at the end of the day.

We Love Feedbacks!!! Its Bread & Butter for Meetup**.**

Organizer/Moderator/Speaker

MuleSoft from Salesforce

Dr. Jitendra Bafna

Director - Artificial Intelligence Practice,
PhiDimensions Inc.

Agenda

- AI Integration Challenges
- What is MCP?
- MuleSoft MCP Server Overview
- Omni Gateway & Private Space
- End-to-End Architecture
- Security & Governance
- Demonstration
- Q&A

The Enterprise AI Challenge

MuleSoft from Salesforce

Current Problems

- AI agents need access to enterprise systems
- Custom integrations create complexity and technical debt
- Security and governance concerns increase with AI adoption
- Lack of visibility into agent actions and tool usage
- Difficulty scaling AI initiatives across the enterprise

Key Question

- How do we securely connect AI agents to enterprise applications at scale?

What is MCP

MuleSoft from Salesforce

Model Context Protocol (MCP)

MCP is an open standard that enables AI models and agents to connect with external tools, APIs, databases, and applications through a standardized interface.

Why MCP Matters

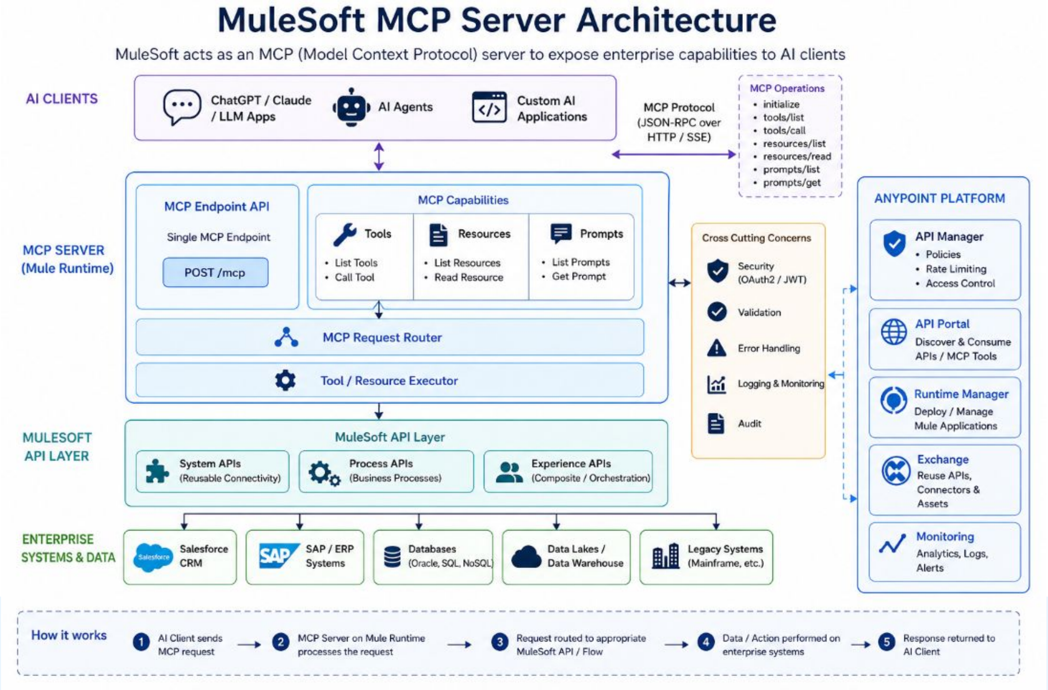
- Standardized agent-to-tool communication
- Eliminates custom integrations
- Enables real-time access to enterprise data
- Supports action execution, not just information retrieval
- Accelerates AI adoption across organizations

What is MuleSoft MCP Server?

The MuleSoft MCP Server acts as a bridge between AI assistants and the MuleSoft ecosystem, enabling developers and agents to interact with enterprise systems using natural language.

Core Capabilities

✓ API specification development
✓ Application creation and deployment
✓ Asset management and publishing
✓ Agent network creation
✓ Security and governance integration
✓ Deployment to CloudHub and RTF



What is Private Space?

Private Space Concept

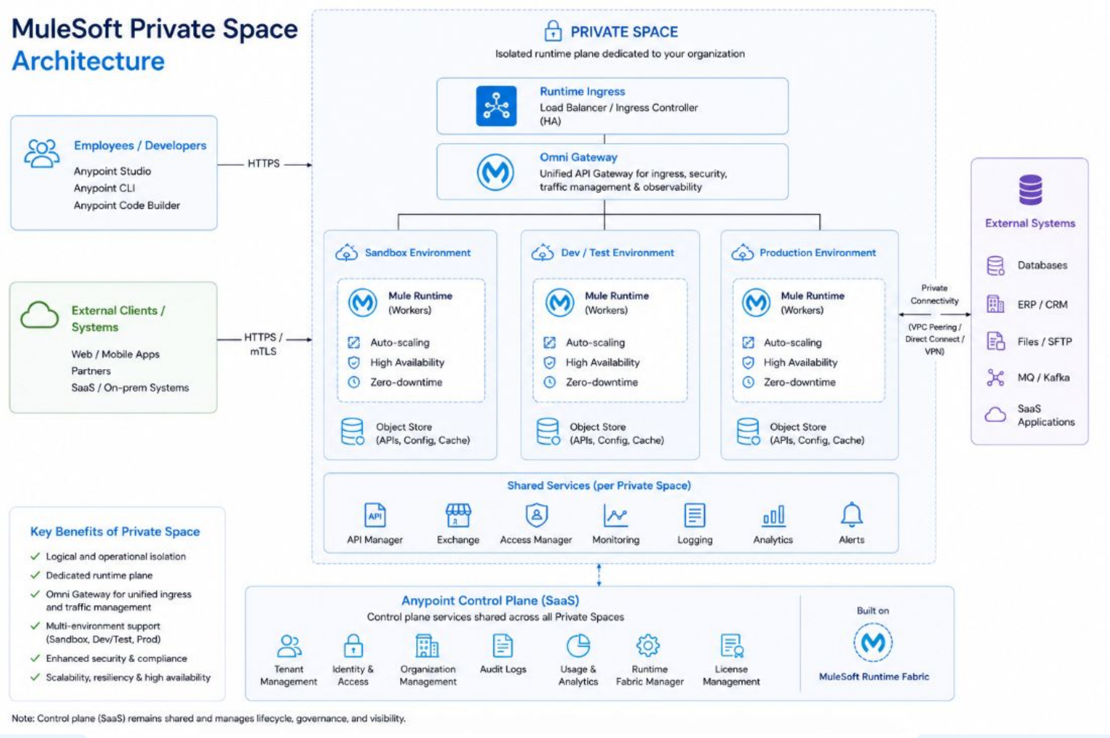
A **Private Space** provides a secure, isolated environment where MCP servers, APIs, and AI agents operate within enterprise-controlled boundaries.

Key Characteristics

- Network Isolation
- Private Connectivity
- Enterprise Security Policies
- Controlled Agent Access
- Compliance & Auditability
- Data Protection

Business Value

Ensures AI agents can access enterprise capabilities without exposing critical systems to public networks.



Omni Gateway – The Governance Layer

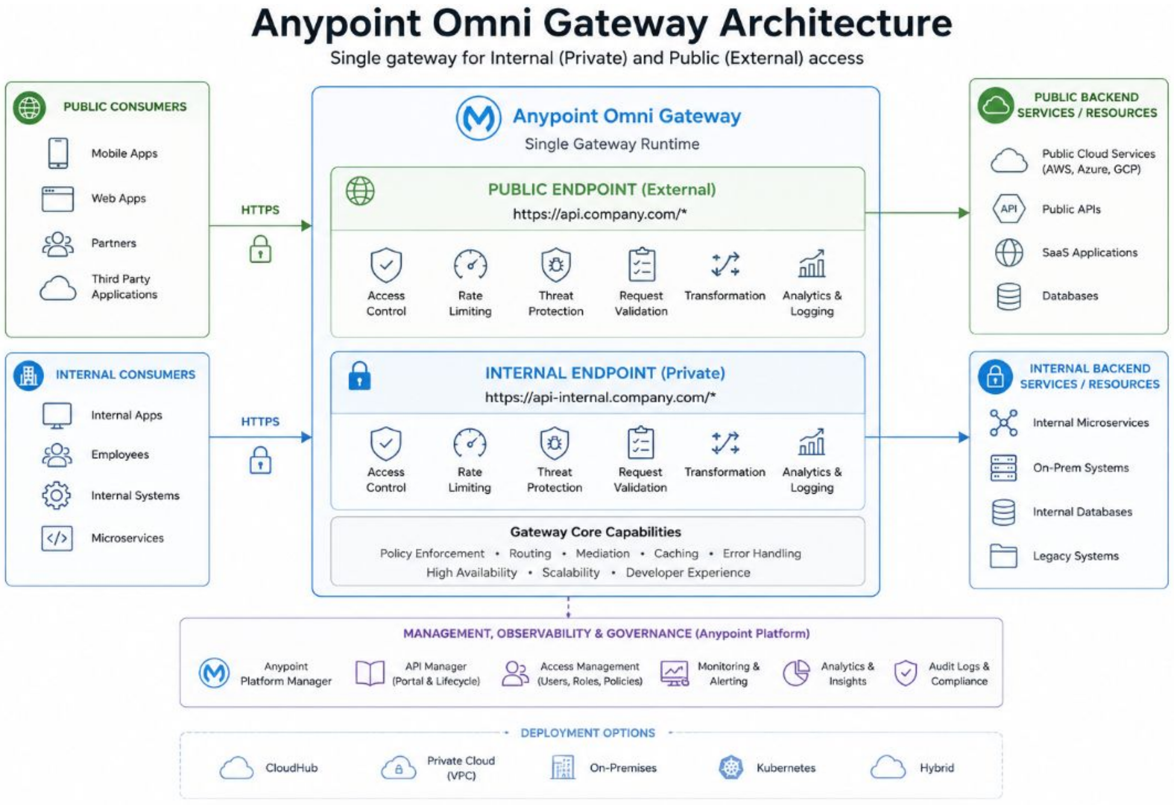
MuleSoft
from Salesforce

What is Omni Gateway?

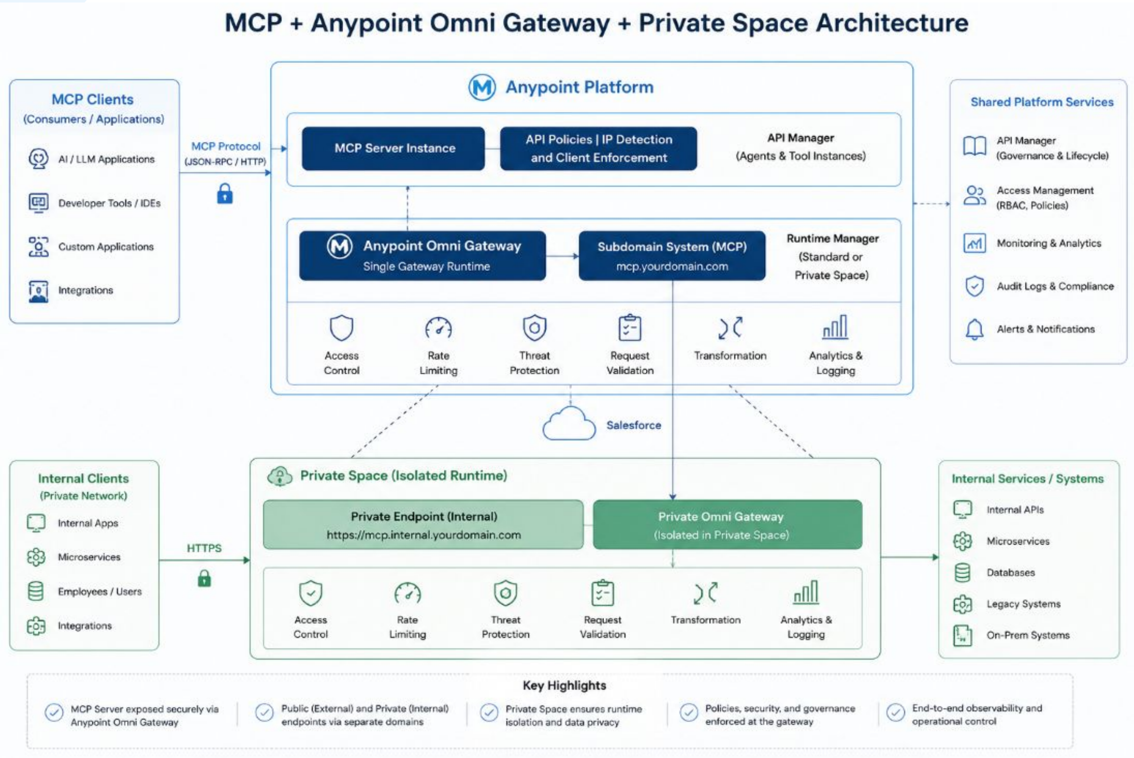
MuleSoft Omni Gateway is MuleSoft's next-generation gateway that secures and manages interactions between AI agents, APIs, applications, and enterprise systems.

Key Features

- Unified governance layer
- Native MCP support
- Cross-platform gateway federation
- End-to-end observability
- Enterprise security controls
- Cost and token monitoring

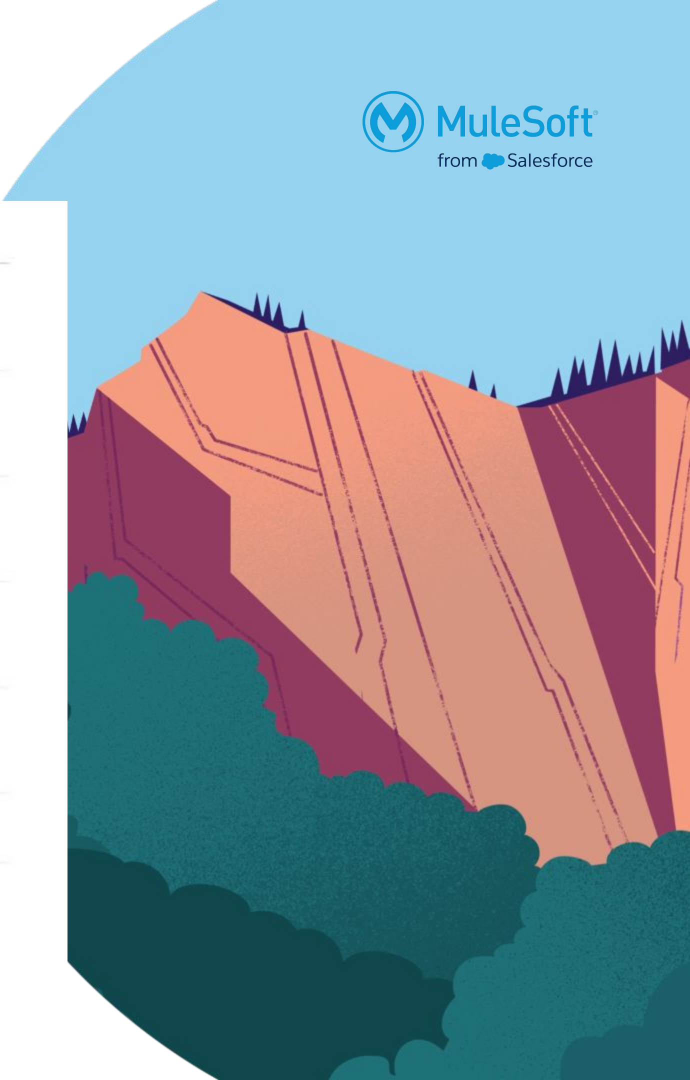


MCP + OMNI Gateway + Private Space



- MCP Clients connect securely to Anypoint Platform using MCP protocol.
- Anypoint Omni Gateway manages MCP APIs with security policies and controls.
- API Manager provides authentication, client ID validation, and governance.
- Runtime Manager deploys applications in CloudHub Private Space for isolation.
- Gateway handles routing, rate limiting, threat protection, and analytics.
- Private endpoints enable secure access to internal systems and services.

Managed V/S Self-Managed Omni Gateway



Area	Self-Managed Omni Gateway	Managed Omni Gateway
Deployment	Customer deploys and operates gateway runtime	MuleSoft manages gateway runtime
Infrastructure	Runs on customer-controlled environment (CloudHub, Kubernetes, on-prem, etc.)	Runs on MuleSoft-managed infrastructure
Operations	Customer handles upgrades, scaling, monitoring, and maintenance	MuleSoft handles operations, patching, and availability
Control	More customization and control over configuration	Less infrastructure control, more simplicity
Security	Customer manages network, policies, and runtime security	Built-in managed security and governance features
Scalability	Customer plans and manages scaling	Automatic/managed scaling options
Best Fit	Enterprises needing strict control or private deployments	Teams wanting faster setup and reduced operational effort
